## IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Este informe contiene información muy importante sobre su agua potable.

Tradúzcalo o hable con alguien que lo entienda bien.

### DRINKING WATER WARNING

MD-43 Miami Creek water has high levels of Nitrates

**DO NOT GIVE THE WATER TO  
INFANTS UNDER 6 MONTHS OLD OR PREGNANT WOMEN  
OR USE IT TO MAKE INFANT FORMULA**

Results from water samples taken from the system wells this year show **nitrate** levels ranging from **26.4** to **76.0** milligrams per liter (mg/L). Some of these samples exceed the nitrate standard or maximum contaminant level (MCL), of 45 mg/L. Nitrate in drinking water is a serious health concern for infants less than six months old.

#### What should I do?

- **DO NOT GIVE THE WATER TO INFANTS.** *Infants below the age of six months who drink water containing nitrate in excess of the MCL may quickly become seriously ill and, if untreated, may die because high nitrate levels can interfere with the capacity of the infant's blood to carry oxygen. Symptoms include shortness of breath and blueness of the skin. Symptoms in infants can develop rapidly, with health deteriorating over a period of days. If symptoms occur, seek medical attention immediately.*
- **PREGNANT WOMEN SHOULD NOT CONSUME THE WATER.** *High nitrate levels may also affect the oxygen-carrying ability of the blood of pregnant women.*
- Water, juice, and formula for children under six months of age should not be prepared with tap water. Bottled water or other water low in nitrates should be used for infants until further notice.
- **DO NOT BOIL THE WATER.** Boiling, freezing, filtering, or letting water stand does not reduce the nitrate level. Excessive boiling can make the nitrates more concentrated, because nitrates remain behind when the water evaporates.
- If you have other health issues concerning the consumption of this water, you may wish to consult your doctor.

## **What happened? What is being done?**

Nitrate in drinking water can come from natural, industrial, or agricultural sources (including septic systems, storm water run-off, and fertilizers). Levels of nitrate in drinking water can vary throughout the year. While some of the well samples exceed the MCL for nitrates, the water in your system is a blend of water from your wells and water from MD-60. This blended water has not exceeded the MCL, but because we cannot ensure that the level of nitrates in the system will remain below the MCL we must continue these notifications.

Last winter from November to April your system was supplied with 100% of its water from MD-60. We are doing that again this year and will continue until the demand increases and we are forced to reactivate your wells to meet system demands.

We continue to wait for completion of the review of the State Revolving Fund (SRF) Application by the California Department of Public Health (CDPH) to find out the type and amount of funding they will provide. In January 2010, the state changed the process in which they award SRF Funding. They will release the funding in two phases. The first phase will be for planning and design; the second phase will be for the actual construction. **This summer** the planning and design funding is supposed to be released. When we get more detailed actionable information we will notify the property owners in your district to schedule a meeting to discuss the options. We will continue to provide updates in the quarterly notices and in the Consumers Confidence Report (CCR) in July. We will continue to keep you informed of the progress and will request your participation in the decision making process.

## **Secondary Notification Requirements**

Please share this information with all the other people who drink this water.

*Upon receipt of notification from a person operating a public water system, the following notification must be given within 10 days [Health and Safety Code Section 116450(g)]:*

- **RESIDENTIAL RENTAL PROPERTY OWNERS OR MANAGERS** (including nursing homes and care facilities): *Must notify tenants.*

This notice is being sent to you by MD-43 Miami Creek Water System.

State Water System ID#: 2000557 Date distributed: April 2010

For more information, you may call Madera County Special Districts at (559) 675-7820 or 2037 W. Cleveland Ave., Madera, CA 93637

Best regards,

Steven Norman
